

Session Title: *Unlocking Intangible Assets: How to Leverage Your IP to Grow Your Business by 400%*

Speakers: Frederick Tan (Host/Consultant) & Rosemary Kwa (Founder, Pétale Tea)

Phase 1: The Origin Story & Unbundling Hidden IA

Frederick:

"Welcome, everyone! Rosemary, it's fantastic to be on stage with you today. Many people see Pétale Tea as a beautifully wrapped, luxurious beverage brand, but few know that your journey started deep inside traditional tearooms, spending over a decade mastering the delicate art of tea-making. When you launched Singapore's first blooming tea brand in 2018, how did you shift your mindset from traditional craftsmanship to building an unbundled Intangible Asset (IA)?"

Rosemary:

"Thanks, Frederick! You're spot on. In tea rooms, I learned that tea is never just a drink—it's a sensory experience. But if we had just sold loose tea leaves by weight, we would have been trapped in a low-margin commodity race. We realized our true IP wasn't the physical leaf; it was the visual spectacle—watching delicate flowers unfurl slowly in warm water to create a 'moment of pause.' By unbundling that artistic craftsmanship, visual storytelling, and proprietary blending recipes into a distinct Intangible Asset portfolio, we transformed an ancient commodity into an experiential wellness brand."

Phase 2: Sustainability as a Door-Opener for Blue-Chips & Retail

Frederick:

"That shift completely elevated your market presence. Today, Pétale Tea is not only stocked in vibrant local hubs like The Green Collective at Funan, Sentosa Sensoryscape, Looqal at Tanglin Mall and Love In The Bottle @ Marina Square, but you've also secured elite corporate pipelines with global icons like Google, Meta, Tiffany & Co., Capella Hotel, and Singapore Airlines. How did zero-waste sustainability help you unlock these tier-one accounts?"

Rosemary:

"Multinational corporations and

premier lifestyle hubs want elevated gifting that fulfills strict ESG mandates. Traditional tea bags generate immense plastic micro-waste and packaging trash. We productized a green, zero-waste IA portfolio—100% loose-leaf, blooming teas completely free of tea bags, housed in eco-friendly packaging, and paired with interactive workshops. When you show global brands that your product delivers a

luxury experience while actively reducing their carbon footprint, sustainability stops being a compliance cost and becomes your ultimate commercial door-opener."

Phase 3: The AI Hyper-Personalization Engine + LIVE Audience Demo

Frederick:

"That brings us to a transformative point in our collaboration on project scaling up! When Pétale Tea engaged FT Synergist for a core capability project—which was 50% funded by Enterprise Singapore—I remembered our quantitative and qualitative market research was to test the hypothesis of making premium tea hyper-personalized yet accessible."

Rosemary:

"Yes, that Project Scaling Up was transformative. We realized consumers didn't just want off-the-shelf blends; they wanted a tea that reflected how they feel in a specific moment. And by the way, I should take this opportunity to thank Enterprise Singapore for this vital funding!"

Frederick:

"And that was the birth of your AI-driven 'Blend Your Own' (BYO) engine! Why just talk about it when we can demonstrate it live right now? Everyone, please pull out your mobile phones!"

[STAGE CUE: Large QR Code appears on screen linking to Pétale Tea's AI Personalization Engine]

Frederick:

"Scan the QR code on screen. This directs you straight to Pétale Tea's AI personalization platform. Input your current mood, wellness goals, or flavor preferences, and watch the algorithm formulate your custom tea blend in real time. Rosemary, how has converting consumer preferences into an AI algorithm strengthened your brand moat?"

Rosemary:

(As audience scans) "It transforms subjective consumer taste into a proprietary data asset. Instead of guessing market trends, our predictive AI algorithm analyzes consumer wellness preferences. It elevates us from a traditional tea vendor into a data-backed wellness platform, ensuring hyper-personalized, premium tea remains accessible to modern consumers."

Phase 4: Asset-Light Multi-Market Scaling

Frederick:

"Looking at the audience, people are already building their custom blends—that's incredible! Now, Rosemary, scaling a physical retail brand internationally usually requires massive factory capex. Yet you've expanded into Indonesia, Amazon US & Australia while staying incredibly lean. (Hope to also go to Hong Kong, UK, Japan, Korea) How did your IP strategy make that possible?"

Rosemary:

"We focus on licensing our intangible assets rather than building heavy overseas brick-and-mortar infrastructure.

In Indonesia, we deployed an asset-light master distribution and licensing framework with strong local partners. For the US market, we scaled via Amazon US using third-party agency fulfillment and ad management. We supply the brand IP, proprietary blends, and quality control, while local partners handle local capex, allowing us to multiply our regional footprint rapidly."

Phase 5: The "NEXT" Move — The Storytelling Tea Series

Frederick:

"Rosemary, you've turned tea craftsmanship into protectable IP, deployed AI for hyper-personalization, and scaled across ASEAN asset-light. To wrap up today... What is 'NEXT' for Pétale Tea?"

Rosemary:

"Our next frontier is establishing Singapore's first **Storytelling Tea Concept**—because we believe tea should be a story you feel and experience, not just consume.

Drawing from my years of travel—from the tranquility of Kyoto's bamboo forests, to the lush Tegallalang Rice Terraces in Ubud, to the vibrant heritage of Kampong Glam—we created the **Storytelling Tea Series**. Each tin holds a narrative centered on a protagonist, a place, and a moment.

Moving forward, Pétale Tea isn't just selling tea; we are building an emotional narrative framework where *Pétale Tea journeys through every chapter of your life*. Whether you're seeking calm, clarity, or celebrating milestones at wedding fairs like Hitched, the story inside the tin becomes intertwined with your own."*

Frederick:

"That is a powerful evolution—turning a functional product into a lifelong emotional narrative. Rosemary, thank you for sharing your inspiring IP journey with us today!"
